

Karin Dom New Building

The main idea of this new building for Karin Dom foundation that will serve children with special needs and their families.

in this project we are concerned with connecting the child first with society, This is will be achieved through distinct educational entertainment spaces for him. And secondly, by nature, discovering and dealing with it closely, as it is one of the most important means of rehabilitation in life.

The effect of nature in the home and in the workplace serves to stimulate both the senses and the mind, improving mental cognition and performance. (Bisco Werner 1996; Brethour 2007; Frank 2003; Pohmer 2008; Serwach 2008; Shibata, 2001, 2004; Yannick 2009).

In Varna, Bulgaria, especially on the land of the project, the tree is the most important component of nature According to the statistics for the year 2011-2018, trees cover 48.1% of the total area, and we lose nearly 2% of them in order to build administrative buildings. While the tree component is an important and greatly influencing the child's life in general just because of his presence around it and dealing with it directly.

That's make us respect the elements of the trees inside the project land and lost as little as possible from the weak " according to the table of the elements of the trees shown in the competition brief file".

Among the trees we create an area where the building is located, with a tree contained within or near this area, to be an element of the building that the child deals with in a familiar and natural way.

The child's interaction with the tree inside and outside the building on a continuous way and with Agriculture in the garden of the building significantly affects the child's health, mental and physical which is called "Horticulture".

The general purpose of horticultural therapy is to improve a person's physical and mental well-being

"He has improved a lot, especially when it comes to sensory integration," she says. "He loves growing plants and flowers because he cares about things that are alive."

Total Area is 1774 square meter
Landscape Area 950 square meter
