

In order to meet the function and make the best use of the plot, a volume occupies the space in the maximum building range. Based on that, two semicircular holes are scooped out from the mass. The north one is as the entrance of the building and the other become the central space outside. Besides, another two square yard are digged and as a result, the interior space of the building is well lit. Meanwhile along the southwest border of the plot, an open space with good sunlight is created and most of the trees in good conditions are reserved.

Inside the building, all functional rooms are well located following the principle of independence of each group. Most of the roof land is covered with grass as a kind of efficient energy-saving technology. Meanwhile a piece of playground is created for both kids and staffs.

underground floor area	610.6 m <sup>2</sup>
ground floor area	525.4 m <sup>2</sup>
1st floor area	616.7 m <sup>2</sup>
2nd floor area	637.5 m <sup>2</sup>
gross floor area on the above-ground level	1779.6 m <sup>2</sup>
Total landscaped area	1279.4 m <sup>2</sup>
Number of parking space	19
